

Product Description

The SOHO Access™ Dual Door solution is for unique applications allowing a service provider, the consumer, and the contractor all to share the same enclosure while limiting access to different sections. This product has two doors with the option of locking one for security purposes. This is an ideal solution for providers or property owners wanting to protect their investment from unauthorized changes and network tampering while at the same time giving the consumer or contractor access to the other portion of the enclosure. A metal partition with two cable access holes divides the top and bottom portions of the enclosure. This partition (SAM-EPM) is included with the enclosure. The Dual Door solution is currently available in the 42" enclosure size with the option of either a 14" over 28" cover or a 21" over 21" cover.

SAE-42DDC-1428

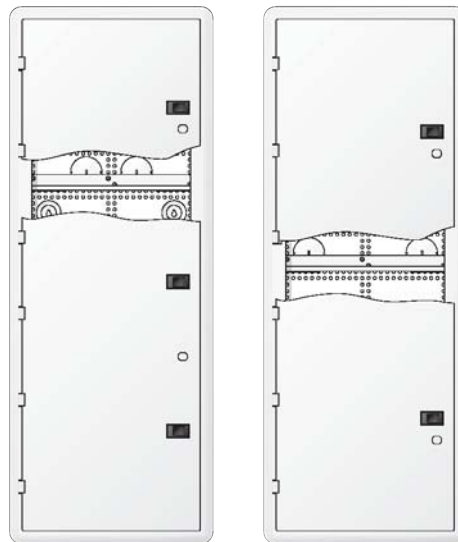

42" surface/flush mount home network enclosure, fits between 16" studs, includes 14"/28" dual door cover and partition module

SAE-42DDC-2121
